

IT & DIGITAL AGENCY

Website Development Brief

A complete brief for the design and development of a professional UK-based digital solutions agency website.

1. Project Overview

Create a modern, professional and premium-looking website for a UK-based IT and Digital Solutions company. The company will provide services to startups, small businesses, established companies and entrepreneurs, helping them improve their digital presence through websites, mobile applications, graphic design, branding and ongoing technical support.

The website should feel professional, trustworthy, modern and technically capable. It must not look like a cheap template. It should be fast, mobile responsive, SEO-friendly and easy to navigate, with strong calls to action encouraging visitors to request a quote or make contact.

2. Main Business Message

We Build Digital Experiences That Grow Businesses.

Supporting message: From websites and mobile applications to branding and digital solutions, we help businesses build a powerful and professional digital presence.

Primary CTA: Get a Free Quote

Secondary CTA: Explore Our Services

3. Target Customers

- Startups
- Small and medium-sized businesses
- Restaurants and takeaways
- Retail and e-commerce businesses
- Professional service companies
- Property and construction companies
- Local businesses
- Entrepreneurs and new business owners
- Established companies improving their digital presence

The design should be professional enough for corporate clients while remaining approachable for smaller businesses.

4. Website Structure

Main navigation: Home | About Us | Services | Our Work | Packages | Contact

Include a prominent Get a Quote button in the navigation.

5. Home Page

Hero Section

Turning Ideas Into Powerful Digital Solutions

Supporting text: We design and develop websites, mobile applications and digital experiences that help businesses stand out, attract customers and grow.

Buttons: Get a Free Quote and View Our Services. Use modern technology-related visuals, animations or graphics without clutter.

Services Overview

Heading: Everything Your Business Needs to Succeed Online

Website Design & Development

Business websites, e-commerce websites, landing pages, custom websites, website redesign, WordPress development and website maintenance.

Mobile App Development

iOS applications, Android applications, cross-platform apps, business applications, customer portals, MVP development and app maintenance.

Graphic Design & Branding

Logo design, brand identity, business cards, flyers, brochures, menus, social media graphics and marketing materials.

UI/UX Design

Website UI design, mobile app UI design, wireframes, interactive prototypes and user experience design.

E-commerce Solutions

Online store development, product setup, payment gateway integration, shopping carts, order management, optimisation and ongoing support.

IT & Digital Solutions

Business email setup, domain management, website hosting, cloud solutions, technical consultancy and digital business setup.

6. Why Choose Us

Heading: Your Digital Partner, Not Just Another Agency

- Tailored Solutions - solutions designed around each client's actual requirements.
- Modern Technology - reliable, scalable and high-performing development practices.
- Transparent Pricing - clear quotations and defined deliverables.
- Responsive Design - excellent experience across desktop, tablet and mobile.
- Ongoing Support - maintenance and technical support after launch.
- Business Focused - digital solutions designed to support measurable business outcomes.

7. About Us Page

Technology. Creativity. Business Growth.

We are a UK-based digital solutions company helping businesses transform their ideas into professional digital experiences. Our team combines technology, creativity and business understanding to provide websites, applications, branding and digital solutions tailored to each client's requirements.

Our Mission

To make professional digital solutions accessible to businesses of every size.

Our Vision

To become a trusted digital partner for businesses looking to innovate, modernise and grow.

8. Services Page

Create dedicated sections or individual pages for Website Development, Mobile App Development, Graphic Design & Branding, UI/UX Design, E-commerce Development, IT & Digital Solutions, and Website & Application Maintenance.

Each service page should be expandable for SEO and finish with: Have a project in mind? Let's talk. CTA: Get a Free Quote.

9. Our Process

- 01 - Discovery: discuss the customer's business, requirements, objectives and ideas.
- 02 - Planning: define requirements, structure, features, timeline and deliverables.
- 03 - Design: create the visual direction and user experience.
- 04 - Development: build and test the approved solution.
- 05 - Launch & Support: launch after approval and provide ongoing support where required.

Use a visual process layout with subtle scroll animations.

10. Portfolio / Our Work

Each portfolio project should include a project image/mockup, client or business name, industry, services provided, short description, technology used and a project link where appropriate.

The administration system must allow new projects to be added easily. Demo projects may be used during development but must not be presented as genuine client work.

11. Packages

Starter

Professional website, mobile responsive design, contact form, basic SEO setup, social media integration and SSL/security setup.

Business - Most Popular

Everything in Starter plus advanced website, custom design, additional pages, Google Business integration, analytics setup, advanced SEO setup and business email assistance.

Custom / Premium

Custom website or application, advanced functionality, e-commerce, payment integration, custom UI/UX, API integration and priority support.

Prices must be easy to change. The website should support either displaying prices or using Request Quote.

12. Monthly Support & Maintenance

Heading: We Keep Your Digital Business Running

- Website updates
- Security updates
- Backups
- Technical support
- Content changes
- Performance monitoring
- Hosting management
- Domain management
- Application maintenance

CTA: Ask About Our Support Plans

13. Testimonials

Display customer name, company, review and star rating where appropriate. Testimonials must be manageable from the backend. Do not publish fabricated testimonials as genuine reviews; development placeholders should be clearly marked and replaced before launch.

14. Contact Page

Contact form fields: Full Name, Company Name, Email Address, Phone Number, Service Required, Estimated Budget and Project Description.

Service dropdown: Website Development, Mobile App Development, Graphic Design, Branding, E-commerce, UI/UX Design, IT Solutions, Maintenance & Support, Other.

CTA: Request My Free Quote. After submission, display a professional confirmation message. Enquiries should be emailed to the business and, if possible, stored securely in the administration area.

15. WhatsApp / Quick Contact

Include a floating WhatsApp/contact button on desktop and mobile. The telephone/WhatsApp number should be configurable from the backend.

16. Website Footer

Include company logo and description, Services links, Company links, Legal links, business email, telephone, company address and social media icons where accounts are available.

Legal links: Privacy Policy, Cookie Policy and Terms & Conditions.

17. Design Direction

The design should communicate Modern + Premium + Technology + Trustworthy + Creative.

- Clean layouts
- Strong typography
- Generous white/negative space
- Professional icons

- Modern illustrations and graphics
- Subtle gradients where appropriate
- Smooth animations
- Professional hover effects
- Rounded modern cards
- High-quality project mockups

Avoid excessive animation or effects that make the website slow or difficult to use.

18. Mobile Design

The website must be fully responsive across desktop computers, laptops, tablets, iPhones and Android phones. Mobile usability is particularly important; navigation, forms, images, buttons and animations must work correctly on smaller screens.

19. Website Performance

- Optimised images
- Lazy loading where appropriate
- Clean code
- Fast page loading
- Caching
- Minimised unnecessary scripts
- Responsive images
- Core Web Vitals optimisation where practical

Do not sacrifice performance simply for animations.

20. SEO Requirements

- Editable page titles and meta descriptions
- Clean URLs
- Correct H1/H2/H3 structure
- Image ALT text
- XML sitemap
- Robots.txt
- Canonical URLs where required
- Schema/structured data where appropriate
- Google Search Console compatibility
- Google Analytics integration
- Fast mobile performance

Individual service pages should be capable of ranking independently in search engines.

21. CMS / Admin Panel

Authorised users should be able to manage website text, services, portfolio/projects, testimonials, images, blog posts, contact information, pricing/packages, SEO titles/descriptions and contact enquiries.

The developer should provide administrator access and basic instructions for managing the website.

22. Blog / Insights

Create a blog structure even if no articles are published initially. Suggested categories: Web Development, Mobile Apps, Business Technology, Graphic Design, Branding, E-commerce and Digital Growth.

23. Security

- SSL/HTTPS
- Secure administration login
- Spam protection on forms
- CAPTCHA or equivalent where appropriate
- Regular backup capability
- Software/plugin updates where applicable
- Secure handling of customer information

24. Legal & Privacy

Because the business will operate in the UK, provide dedicated pages/placeholders for Privacy Policy, Cookie Policy and Website Terms & Conditions, together with an appropriate cookie consent mechanism where required. Final legal wording should be reviewed separately before publication.

25. Call-to-Action Strategy

The website's main objective is to generate enquiries. Use clear CTAs throughout, including Get a Free Quote, Start Your Project, Book a Consultation, Talk to Our Team, and Have an Idea? Let's Build It.

26. Technical Ownership

Important accounts and assets created for the project should ultimately remain under the company's ownership/control, including domain, hosting, website administration, source code/repository, analytics, Search Console, business email, database and design/source files.

The solution should be maintainable by another competent developer in the future if necessary.

27. Final Objective

The finished website should immediately communicate who we are, what services we provide, why clients should trust us, examples of what we can create, and how a potential client can start a project.

Position the company as a professional UK digital technology partner - not simply a freelancer offering website design.

Long-term objective: build a recognised digital agency providing website development, mobile applications, graphic design, branding, e-commerce and technology solutions to businesses in the UK and internationally.
